

Asbestos Bulk Analysis & Sampling Services

UKAS accredited to ISO/IEC 17020 and ISO/IEC 17025 for undertaking all types of asbestos inspections and testing, Core's dedicated team of professional consultants has a proven track record for providing bespoke, practical and affordable solutions.

Our clients benefit from our in-house UKAS accredited asbestos testing laboratory. This enables us to offer surveys, sampling and analysis, all under one roof.

Following the analysis, a certificate is issued

that clearly shows whether or not asbestos is present and, where applicable, what type of asbestos it is.

Particularly in the case of domestic clients, a survey can be more than is required, so if you are simply looking to find out if one particular product within your property contains asbestos, our sampling service may be more appropriate.

Please visit our website for further information about our asbestos laboratory services or simply give us a call.
